

FlowCon FH actuator range released

- Electrical actuators with Feedback signal for FlowCon Green.3 valve range.

FlowCon has now released the 24V modulating actuator (FH.0.2) and the 24V 2-position or 3-point floating actuator (FH.0.4) suitable for the FlowCon Green.3 valve range.

- **FlowCon FH.0.2**
24V 0(2)-10V modulating actuator
- **FlowCon FH.0.4**
24V Digital, 2-position or 3-point floating actuator

The FlowCon FH actuator series are especially developed to provide optimal performance in conjunction with FlowCon Green.3 valve range. The FH actuator range is, though holding a larger close off pressure, built on the well known and proven base of the FN actuator range, having similar useful functionality. Key features are as follows:

- **Automatic calibration**
- **Feedback signal (FH.0.2 only)**
- **Possibility of setting control signal via DIP switches 0(2)-10V (FH.0.2 only)**
- **Position indicator**
- **Manual override**
- **Click on/click off function**

Please note that the new FlowCon FH actuator range will be suitable for the FlowCon Green.3 range only, despite holding similar design as the currently available FN range.
