

## New SM.4/SH.4

FlowCon now introduces a new SM.4/SH.4 valve to cover larger flow rates in the 80-100mm pipe.

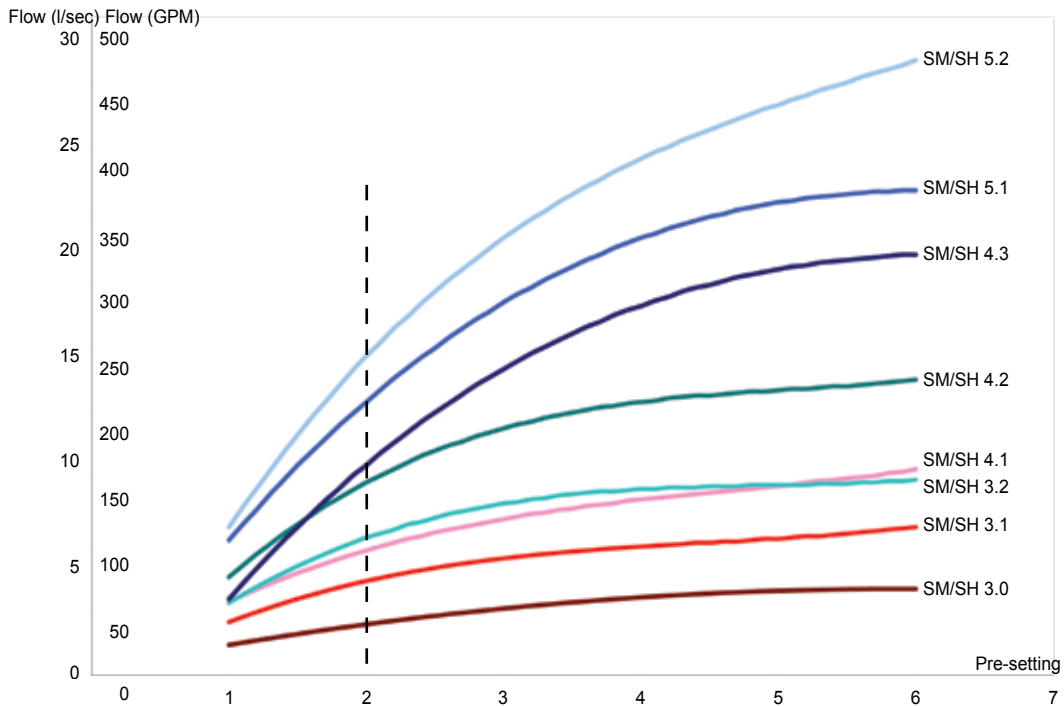

The physical valve bodies for the two new models are a bit larger in size, but the universal end flanges will of course still fit DN80/100 pipe flanges. The new valves will provide dynamic balancing of flows between:

**13300-72700 l/hr (58.3-320 GPM)**  
in a dP range of: 60-400 kPaD (8.7-58 psid).

The new valve bodies will fill in the large gap between the existing type 4.2 and the 5.1.

For further details as to technical information, please go to "downloads" at [www.flowcon.com](http://www.flowcon.com).  
For price- and delivery information please contact your local FlowCon office for assistance.
